This is not a traditional cover letter. Just trying to share some of my thoughts. To present myself as a designer as well as a person.

~ My initial experience comes from the print industry. So my passion for design was born long time ago. I was playing with filters in Photoshop 3.0, with vectors in Corel Draw 6 and with letters in QuarkXPress 4.1.

~ To thrive for life long learning, is for me one of the most essential traits of all human qualities. Learning something new is like another birth. You will not be the same.

~ Photography is my hobby from childhood. Initially, I used an analog process for making photos, with reagents, photo paper, etc. I love to make portrait and still-life images. And most of all I love to

take pictures that appeals to positive feelings.

~ The interface has to be clear. I like phrase – "A herd of buffalo can only move as fast as the slowest buffalo". So we need make interfaces as simple and user friendly.

~ The work must be fun. In that case, you will forget about time and about the fact that it's a work. To be in flow is neural happiness. But you need to fill your tank, time to time. You'll need to rest.

~ Good design can change the world and make it a better place, I am a believer.
